1. Organization Details

Name: CYART

Industry: Cybersecurity

Website: <https://cyart.io>

Email: security@cyart.io

2. Executive Summary

The assessment identified 1 Critical, 2 High, 2 Medium and 1 Low severity findings across 4 assets. The average CVSS score is 5.76. The overall organizational risk is

Critical.

Statistics

3. Scope

- assessment_name
- assessment_type
- target
- assessment_period
- assessment_team
- framework
- testing_type

4. Methodology

- Planning
- Reconnaissance
- Vulnerability Assessment
- Manual Validation
- Risk Analysis
- Reporting

5. Asset Inventory

Hostname	IP Address	Operating System	Status
WEB-PROD-01	192.168.1.10	Ubuntu 24.04	Active
DB-PROD-01	192.168.1.20	PostgreSQL 16 / Debian 12	Active
API-GW-01	192.168.1.30	Amazon Linux 2023	Active
LB-PROD-01	192.168.1.40	F5 BIG-IP 17.x	Active

6. Findings

SQL Injection in Authentication Endpoint

CRITICAL

CVSS: 9.8

DESCRIPTION

The /api/v1/login endpoint fails to sanitize the 'username' parameter, allowing an attacker to bypass authentication and extract arbitrary database records via boolean- and time-based blind SQL injection.

REMEDIATION

Use parameterized queries / prepared statements for all database access. Deploy a WAF rule as an interim compensating control and rotate any credentials that may have been exposed.

Outdated Apache HTTP Server Version

HIGH

CVSS: 8.7

DESCRIPTION

WEB-PROD-01 is running Apache 2.4.49, which is affected by publicly known path traversal and remote code execution vulnerabilities (CVE-2021-41773, CVE-2021-42013).

REMEDIATION

Upgrade Apache HTTP Server to the latest supported stable release and enable automated patch management for internet-facing hosts.

Excessive Database Privileges for Application User

HIGH

CVSS: 7.8

DESCRIPTION

The application's database service account has superuser privileges on DB-PROD-01, violating the principle of least privilege and increasing blast radius in the event of application compromise.

REMEDIATION

Create a dedicated least-privilege role scoped to only the schemas and operations the application requires; revoke superuser access.

Weak TLS Configuration

MEDIUM

CVSS: 5.6

DESCRIPTION

LB-PROD-01 accepts TLS 1.0 and TLS 1.1 connections and supports several weak cipher suites (e.g. RC4, 3DES).

REMEDIATION

Disable TLS 1.0/1.1 and weak cipher suites; enforce TLS 1.2+ with modern cipher preference ordering.

Missing Rate Limiting on API Gateway

MEDIUM

CVSS: 5.3

DESCRIPTION

API-GW-01 does not enforce per-client rate limiting on authentication and password-reset endpoints, enabling credential-stuffing and brute-force attacks.

REMEDIATION

Implement per-IP and per-account rate limiting with exponential backoff and CAPTCHA challenges on authentication endpoints.

Verbose Server Banner Disclosure

LOW

CVSS: 3.1

DESCRIPTION

HTTP response headers on WEB-PROD-01 disclose exact server software and version, aiding attacker reconnaissance.

REMEDIATION

Suppress or generalize Server/X-Powered-By headers.

Missing Security Headers

CVSS: 0.0

DESCRIPTION

Responses from WEB-PROD-01 lack Content-Security-Policy, X-Frame-Options, and X-Content-Type-Options headers.

REMEDIATION

Add standard hardening headers at the load balancer or application layer.

7. Risk Matrix

Critical	High	Medium	Low	Informational
0	0	0	0	0

8. Compliance Mapping

Framework	Control	Status
NIST CSF	PR.IP-12	
ISO 27001	A.12.6	

9. Recommendations

- {'priority': 1, 'title': 'Immediate Remediation Required', 'description': 'Resolve this Critical vulnerability immediately.'}
- {'priority': 2, 'title': 'High Risk Remediation', 'description': 'Patch this High severity vulnerability as soon as possible.'}
- {'priority': 2, 'title': 'High Risk Remediation', 'description': 'Patch this High severity vulnerability as soon as possible.'}
- {'priority': 3, 'title': 'Medium Risk Remediation', 'description': 'Schedule remediation during the next maintenance window.'}
- {'priority': 3, 'title': 'Medium Risk Remediation', 'description': 'Schedule remediation during the next maintenance window.'}
- {'priority': 4, 'title': 'Low Risk Improvement', 'description': 'Address this issue as part of routine security improvements.'}
